ABOUT US

We are a Polish company with over 20 years of experience in the window covering industry. Our specialties include pleated shades and screen roller blinds, but we also make blinds, roller blinds, and mosquito nets. From the very beginning of our activity, we've been focusing on professional service and comprehensive solutions, which include: design, production, sale, as well as installation and service of window covers.

Development and innovation guide our daily work, in which we constantly strive to improve and bring the best products to the market. In addition, we have the competence and tools to modify and adapt products to individual needs.

The heart of our company are people: Employees, Customers, and Contractors. Thanks to harmonious internal cooperation and listening to the needs of consumers we continuously develop our offer.

We are ready to carry out business orders. We will be happy to make products for you according to the individual project. We also have a comprehensive portfolio of ready-to-made products. We invite you to cooperate.

OUR ACTIONS

We take into account the individual needs of our customers

“The greatest joy is the satisfaction of our customers, the trust they place in us and the comfort of mutual cooperation.”

Our mission is to support customers in the proper selection of window coverings so that they answer their needs and the function of a given room. We focus on communication, thanks to learning about customer expectations, advising, and sharing our experience. We know every house deserves a proven window protection system, and each window should be taken care of individually.

With business customers, we are flexible. We offer convenient terms of cooperation, remaining open to recipients' comments, suggestions, and observations. Efficient consultations and transparency in presenting the offer allowed us to build trust and long-term partnerships with numerous companies and organizations.

WHAT IS OUR SPECIALIZATION?

In the VEMAR's offer, the customers will find products for home interiors and external shielding systems. This first group includes internal blinds, roman roller blinds, blinds, pleats, curtains, and curtain rods. On the outside, facade blinds, protective external roller blinds, pergolas, mosquito nets, awnings, and many other covering systems are installed.

A wide range of technical and color solutions characterizes our offer.

We offer automatic controls from the brand

somfy.

CUSTOMISED PRODUCTS

Advanced line production allows us for an individual approach for each order.

SERVICE

All products purchased from us are under warranty.

CONSULTANCY

We help our customers in choosing a product, we also provide technical support.

PLEATED SHADES

INVASIVE | NON-INVASIVE | ROOF

Versatility, matching many interiors and various arrangements, is an essential feature of window covers. Well-chosen window decorations allow you to make changes in the room's interior without having to adjust the coverings each time. Pleated shades have such features - window coverings that combine functionality and aesthetic values. They are unusual window decorations, and at the same time, they protect against the sun and provide privacy. They can be fitted to all types of windows. Our offer includes fabrics made of recycled polyester.

The pleated shades are straightforward to use. They make it possible to raise and lower the upper and lower profile of the roller shutter independently. They allow complete control over which part of the window will remain exposed and which will be covered. They can be customized, so the window size in a given room does not matter. Thanks to this, it is also **an excellent solution for unusual window shapes, such as triangles, trapezoids, and semicircles**. They will also cover roof windows and those in winter gardens.

DUO 3D ROLLER BLINDS

In response to trends in modern construction, we have created a group of 3D roller blinds. Their secret lies in the combination of modern design, extraordinary functionality and three-dimensionality. What is their phenomenon? The blinds are provided with special fabric of spacious composition, thanks to which you can regulate the amount of light coming from the outside without the necessity to lift the blinds. They are mounted in an aluminium cassette, which fosters its quick assembly and disassembly. In addition to its innovative design, the 3D model perfectly decorates the window.

FACADE BLINDS

Facade blinds effectively protect rooms against excessive solar radiation. They allow you to freely adjust the amount of light entering through the glass. The blinds are composed of flat movable slats made of aluminium tape. They effectively protect the rooms against heating, create convenient optical and thermal conditions and reduces noise levels. Facade blinds can be controlled electrically with an additional option of manual. They are perfect for modern architecture.

PLEATED MOSQUITO NETS

Pleated mosquito nets are intended for installation both in windows (including roof windows), as well as in balcony and terrace doors. Their universality is due to their specific design - the net is folded out accordion-wise and its edges are located in a special guide. This structure provides that the entire system does not take up much space, so it can be mounted in narrow glazing or in sliding patio doors.

Individual models also differ in terms of the way the net moves – vertical, horizontal and double-sided versions are available, so you can easily find an option among these products tailored to a specific application.

The insect screen profile is made of extruded aluminum, ensuring its high durability level. It is available in several colors. Mesh used in this system is made of fiberglass. Pleated mosquito nets provide an effective and ecological way to get rid of insects.

PERGOLAS

Outdoor pergolas provide effective protection against excessive sunlight and high temperatures. By creating additional relaxation space, they create an atmosphere of privacy and coziness. Automated pergolas provide users with comfort not only during the summer day.

They are made of aluminium frame, powder coated in various colours

Thanks to additional equipment options, such as Led lighting, weather sensors, radiators and heating it is possible to use them for the whole year. The systems can be optionally expanded with slide type side covers (filled with Serge fabric or feathers) or Refleksole ZIIP, which increases their functionality and expands the possibilities of application.

SCREEN ROLLER BLINDS

Modern construction has a growing trend to use large glazed surfaces. This results in the increasing demand for modern covers that complement the styling, protect from light and ensure privacy. Screen roller blinds, also known as reflexes, thanks to their minimalist style, perfectly match various kinds of interiors and facades of buildings and are an excellent choice for extensive glazing.

Screen roller blinds are large-area blinds made of fabric. They are a very versatile product that can be installed both inside and outside the building.

Screen roller blinds effectively replace traditional roller blinds and blinds, creating an aesthetic and functional whole with windows. They do not entirely darken the rooms, as they are characterized by moderate transparency. Instead, they disperse the sun, giving shade and a sense of intimacy.

In the interiors where screen blinds have been installed, the light is pleasantly broken, but there is good visibility. Contrasts and reflections are suppressed, and simultaneously you can see what is happening outside through the screen blinds.

SCREEN ROLLER BLINDS

Screen roller blinds will work, among others, in:

Private houses

Offices

Hospitals, hotels, restaurants

Public buildings

The Vemar offer includes screen roller blinds in sizes from 40 to 300 cm, and the maximum size is 5000x5000. We produce them in three standard colors: white, anthracite and grey. On individual request, it is possible to paint with colors from the rich RAL palette.

The sets have welded sides mounted in guides, which ensures their high functionality. It is possible to install a weather automation system in the external blinds, protecting them in unfavorable weather conditions. Screen roller blinds are controlled manually or electrically. This product has a similar effect to the mosquito net, so it can easily replace it. There is no doubt that screen roller blinds are the right choice for all large-size windows.
